**Item 10:** UPDATE ON STRATEGIES AND POLICIES RELATED TO GSP DEVELOPMENT

**Discussion:**

Johansen provided updates on the GSP and provided handouts of the presentation to those present. Johansen reported on the following items:

- Progress made within the GSP;
- Assigning overdraft estimates among the GSAs within the Kings Subbasin;
- The Kings Subbasin Coordination group agreed to Alternative 4, which accounts for storage change with recognition of historic boundary flow and recognizes adjustment in groundwater flows for decreased aquifer thickness. The Group recognizes that numbers will change when additional information is obtained; new information will be re-evaluated in the future.
- Improving the monitoring network and establishing monitoring standards and collection methods. Johansen presented the draft well monitoring network and recommended to select two to three wells per township and/or one well per every eighteen to twelve square miles.
- Discussed the geology of the NFK GSA and how it affects groundwater levels.
- Discussed components of the water budget.
- Staff are working on obtaining the region’s water quality data.
- The amount of overdraft that cannot be overcome with water supply will need to be overcome with management actions that reduce water demand.

Johansen answered questions regarding gathering data, testing drinking water systems for water quality, and potential management actions for future consideration.
