

Well Permit
Landowner Acknowledgement

The following well will be installed in (check one) <input type="checkbox"/> Fresno County or <input type="checkbox"/> Kings County	
Well Permit Number:	APN:
Well Site Coordinates (Lat/Long):	Landowner Name:
Township / Range / Section:	Owner Phone Number:
Job Address Location:	Owner Email Address:
Driller Business Name:	Driller Email Address / Phone Number
This well is a (check one) <input type="checkbox"/> Replacement Well (existing well to be abandoned) or <input type="checkbox"/> New Well If a replacement well, can existing well be used as a monitor well? (check one) <input type="checkbox"/> Yes or <input type="checkbox"/> No	

1. The Minimum Threshold established by the GSA (lowest anticipated water level) in the vicinity of the proposed well is _____ ft. The GSA recommends that this well be constructed with perforations extending a minimum of 40 feet below the Minimum Threshold for drawdown.
2. The GSA encourages the optimization of conjunctive use and promotes surface water use when available.
3. The GSA encourages all new agricultural wells drilled in the North Fork Kings GSA boundary to install a dedicated sounding tube to measure water levels.
4. The GSA may include the proposed well in the North Fork Kings GSA Monitoring Network. If this well is selected, by signing below the landowner hereby grants the GSA access to monitor and collect data from the proposed well, including but not limited to water level measurements, water quality samples and reference point elevations.
5. The GSA may require a meter be installed on this well in the future and data reported to the GSA.
6. The GSA is required to reach sustainability by 2040, which will require limitations on groundwater extractions to obtain sustainable levels at some point in the near future, along with potential overpumping fees. Fees collected would support groundwater management activities required by the GSP and the Sustainable Groundwater Management Act.
7. Wells installed in areas where subsidence is occurring may be subject to additional restrictions on the amount of groundwater that may be pumped and landowners may be required to install subsidence monitoring benchmarks.
8. By signing below, landowner authorizes the Driller to release the Well Completion Report to the GSA.
9. The GSA reserves discretion to adopt additional measures reasonably calculated to avoid, reduce or mitigate the risk of undesirable results defined by the GSP.

By signing below, Landowner acknowledges that the North Fork Kings GSA has, or may in the future, impose the above conditions and agrees to operate the well within parameters established by the GSA.
